In the originally published article, the authors identified an inadvertent error in the reporting of the data collection period in the Materials and Methods and Results sections. The data collection period was incorrectly reported as "September 2018 to February 2023." The correct data collection period is "September 2018 to December 2022." During manuscript preparation, the study completion date (February 2023) was inadvertently reported as the end date of the data collection period instead of December 2022. This correction relates solely to the reported end date of the data collection period. It does not involve any changes to the underlying dataset, the 67 patients included in the study, the methodology, statistical analyses, results, or scientific conclusions of the article. The authors apologize for this inadvertent reporting error and any confusion it may have caused.
